

# Math and Science Camp

Volume 2, Issue 1

July 16, 2008

## Day 3

## Summer 2008

### Rockets!

Rockets were up, up and away today as campers headed out right away this morning to see what design got the best launch. The flights were great. There were some great high fliers. All enjoyed, though temps were moderate and humidity high, campers were just as delighted as instructors to watch water

rockets soar. All campers sent their creations into the air at least once. Many launched twice just to see if the

damage done by landing was great enough to alter their flight. Most of them had great second and third launches. Excellent work campers!

#### Inside this issue:

Rockets	1
Stock Market	1
Pentamemos	1
CSI	1

Pentamemos were the activity for the later part of the afternoon. Campers worked on the shapes created by five equal squares. Now they are using them to cre-

CSI: Environment continues to unravel the mysteries of the pollution of the bay. Today campers examined how erosion occurs. They were suspicious of the deforestation projects up river and tested the sediment levels in each water way leading to the bay. Campers are getting closer to finding out just who is the culprit. Tomorrow they will look at how populations of animals affect the environment and water.

### Stock Market

Campers are getting caught up with their portfolios today. Each camper is checking stock prices for two companies this week. Stock prices are

posted in the hall every day. Will their portfolios end well or poorly? We'll find out. Many campers have "invested" in common food, clothing, and gaming companies. The stability of each will be evident by the end of the week!
